Information about Skywest Airlines and its Attributes

You may not have heard of Skywest Airlines, but for just under four decades they have been flying passengers to several cities in the United States. All through the years, they have increased the number of cities they fly to. This was possible due to the establishment of partnerships with many other regional carriers. Skywest can make your air travel more convenient if you want to travel around the Western states. This includes Colorado, California, and Utah. Read this report to find information on this forward-looking airline that will make the planning of your next trip a breeze.

"Safety First" is a slogan Skywest Airlines is proud of and the statistics bear out their safety record. They have an extremely low accident rate, and have never been cited in any fatal accidents, which is something they can be proud of, considering that they've been operating for over thirty years. Their up-to-the-minute fleet is inspected at least once a week, oftentimes more frequently. Their aircraft include the EMB120, CRJ900, CRJ700ER, and the CRJ200. Even though statistics bear out the fact that it is 32 times safer to fly in an airplane than to be in a car, a lot of people remain unconvinced. Be that as it may, it still stands to reason that it's much wiser to fly with a regional airline because not only is it safer, it's a lot faster.

It's always good practice to monitor your flight information for your flights with Skywest from time to time before your departure date to make sure there have been no schedule changes. This is a practice you should always follow when you are planning a trip by air and most airlines will remind you to do so.

In any case, make sure you go to the partner airlines' website, not the Skywest Airlines website, when you need to find out information about a flight on Skywest, or when you are checking in online. To make this clearer, suppose you have a ticket for Skywest Airlines, but the flight is one Skywest is running on behalf of Delta Airlines. To check in online or get any additional information about your flight, you would have to go to the Delta Airlines website. The same is true for any customer service you may need, such as flight information or any changes you may have to make.

The two major airline carriers that Skywest partners with are Delta and United. However, in 2005, Skywest bought Atlantic Southeast Airlines - which is located in Atlanta, Georgia. Atlantic Southeast has a very comprehensive website with their motto, "Empower People to Stay Connected." It's purpose is to keep you informed on their most recent offers as well as those of its partner airlines. Whereas Skywest Airlines caters to passengers who need to fly in the Western U.S., Atlantic Southeast serves those with travel plans in the Midwest and the Southeast sections of America. Skywest is Atlantic Southeast Airlines' parent company. Skywest purchased ExpressJet in November of 2010, which made ExpressJet a subsidiary of Atlantic Southeast. ExpressJet flies to such diverse locations as San Antonio, Texas and Sacramento, California. If you are looking for a good selection of options in the regional airline venue, you could do no better than planning your flight with Skywest Airlines or one of its partners. If you have a reason to travel to any areas in the Western U.S., Skywest Airlines may be a good choice for you, especially if you want to get to a smaller city. When searching for flights to more remote destinations, major airlines aren't always an option. Based on their wonderful reputation, more people are using Skywest Airlines.
